

TEST SWITCHES AND ACCESSORIES

ABB FT Flexitest™ switch

Visible pole marker

ABB FT Flexitest™ switch visible pole marker (VPM) enhances power system testing and maintenance efficiency.

—
01 FT-1 Flexitest switch with visible pole markers installed

—
02 FT-1 Flexitest switch with open poles and visible pole markers installed

The ABB FT Flexitest visible pole marker (VPM) enables FT Flexitest switch users to clearly see, locally or from a distance, which poles are intentionally or inadvertently left open during testing and maintenance. The VPM provides a visible indication to users to guide them in making sure the subject poles are either in the open or closed state as required.

The VPM is a snap-on pole handle cover that is easy to install over the existing handle and is available in nine standard colors. As shown in Figure 2, the fluorescent orange VPM attached to a standard black handle allows for clear visual indication of the pole being left open. The VPM can be affixed to any pole handle that is essential to the power system operation. The VPM can also be used to mark a switch pole already installed with a different color for ease of circuit identification as shown in Figure 1.

Refer to Table 1 for visible pole marker style numbers. Each style number order includes a bag of ten (10) visible pole markers per item. Please contact your local ABB Representative for price and delivery details.

Table 1: Visible pole marker style numbers

Visible pole marker color	Style number
Black	FT-VPM-BLK
Red	FT-VPM-RED
Green	FT-VPM-GRN
Yellow	FT-VPM-YEL
Blue	FT-VPM-BLU
White	FT-VPM-WHT
Purple	FT-VPM-PUR
Brown	FT-VPM-BRN
Orange	FT-VPM-RAN
